

Press release: 12.844-142/22

Inflation in June 2022 according to flash estimate at 8.7 %

Further increase of fuel and heating oil prices plus food and restaurant prices

Vienna, 2022-07-01 – The inflation rate for June 2022 is expected to be 8.7 %, according to calculations by Statistics Austria as part of a flash estimate. Compared to the previous month, consumer prices rise by 1.4 %.

“The strong price increase of this year accelerated further in June 2022 and is expected to have climbed to 8.7 %. This is shown by a first estimate of Statistics Austria. This means that the inflation rate has risen to its highest level since September 1975. In the meantime, inflation has picked up speed in almost all areas. In addition to recent increases in fuel and heating oil prices, we also see significant increases in restaurant and food prices”, according to Statistics Austria Director General Tobias Thomas.

The index level of the consumer price index and further results for June 2022 will be announced on 19 July 2022.

Consumer Price Index (CPI), June 2022

- +8.7 % yearly rate of change (estimate)
- +1.4 % monthly rate of change (estimate)

Harmonised Index of Consumer Prices (HICP), June 2022

- +8.7 % yearly rate of change (estimate)
- +1.2 % monthly rate of change (estimate)

For further information on the Consumer Price Index, please visit our [website](#).

Information on methodology, definitions: The flash estimates are based on the price data stock existing at the time of publication for the compilation of the consumer price index at the end of a respective reference month. Usually about 80% to 90% of the prices collected for the CPI can be used for the flash estimate, but without having gone through the full price statistical validation checks. Price reports received later or delayed for the reference month, as well as the corrections made in the course of the usual data compilation process, mean that the CPI flash estimates can differ from the annual and monthly rates of change of the consumer price index published in the middle of the following month (see CPI publication dates). It is not permissible to use the CPI flash estimate for contractual value adjustments or to equate it with the results of the consumer price index or the harmonised consumer price index.

Harmonised Index of Consumer Prices (HICP): Differences between the Consumer Price Index (CPI) and the EU-wide comparable Harmonized Index of Consumer Prices (HICP) are primarily based on weighting differences. While the CPI only takes into account households living in Austria, the HICP also covers expenditure by foreign tourists.
