

Press release: 12.948-246/22

Inflation in November 2022 according to flash estimate at 10.6 %

Household energy and fuels less expensive than last time

Vienna, 2022-11-30 – The inflation rate for November 2022 is expected to be 10.6 %, according to calculations by Statistics Austria as part of a flash estimate. Compared to the previous month, consumer prices rise by 0.3 %.

“After reaching 11.0% in October 2022, the highest inflation rate in 70 years, it is expected to ease to 10.6% in November 2022. This is mainly due to the fact that the upward pressure on prices for the main inflation drivers household energy and fuel is weakening slightly”, says Statistics Austria Director General Tobias Thomas.

The index level of the consumer price index and further results for November 2022 will be announced on 16 December 2022.

Consumer Price Index (CPI), November 2022

- +10.6 % yearly rate of change (estimate)
- +0.3 % monthly rate of change (estimate)

Harmonised Index of Consumer Prices (HICP), November 2022

- +11.1 % yearly rate of change (estimate)
- +0.1 % monthly rate of change (estimate)

For further information about the Consumer Price Index, please refer to our [website](#).

Information on methodology, definitions: The flash estimates are based on the price data stock existing at the time of publication for the compilation of the consumer price index at the end of a respective reference month. Usually about 80% to 90% of the prices collected for the CPI can be used for the flash estimate, but without having gone through the full price statistical validation checks. Price reports received later or delayed for the reference month, as well as the corrections made in the course of the usual data compilation process, mean that the CPI flash estimates can differ from the annual and monthly rates of change of the consumer price index published in the middle of the following month (see CPI publication dates). It is not permissible to use the CPI flash estimate for contractual value adjustments or to equate it with the results of the consumer price index or the harmonised consumer price index.

Harmonised Index of Consumer Prices (HICP): Differences between the Consumer Price Index (CPI) and the EU-wide comparable Harmonized Index of Consumer Prices (HICP) are primarily based on weighting differences. While the CPI only takes into account households living in Austria, the HICP also covers expenditure by foreign tourists.
