

Press release: 13 562-055/25

Construction costs up year-on-year in February

No cost increases compared to the previous month

Vienna, 2025-03-14 – According to preliminary data from Statistics Austria, the cost of residential and housing construction was in February 2025 2.9% higher than in February of the previous year. In road construction, costs rose by 0.7% compared to February 2024, in bridge construction by 1.5% and in sanitary engineering by 2.6%.

The construction cost index for **construction of residential buildings** was 129.2 index points in February 2025. Compared to February 2024, this corresponds to an increase of 2.9% (see table 1). Against January 2025, costs for construction of residential buildings remained stable (see table 2).

In civil engineering, costs also rose year-on-year in all sectors. The index for **road construction** reached 135.7 index points (+0.7% in annual and stable in a monthly comparison). The index for **bridge construction** reached 129.6 index points, which represents an increase of 1.5% compared to February 2024 and a decrease of 0.2% compared to January 2025. The index for **sanitary engineering** reached 132.5 points (+2.6% in annual comparison, –0.1% in monthly comparison).

For detailed results and further information please refer to our [website](#).

Table 1: Construction cost indices, compared to previous year

Month/Year	Residential buildings		Road construction		Bridge construction		Sanitary engineering	
	Index	Compared to same month of previous year in %	Index	Compared to same month of previous year in %	Index	Compared to same month of previous year in %	Index	Compared to same month of previous year in %
February 2025 ¹	129.2	2.9	135.7	0.7	129.6	1.5	132.5	2.6

S: STATISTICS AUSTRIA, construction cost index. – Overall costs. – Base year 2020.

1) Preliminary results: t+75 final results.

Information on methodology, definitions:

Construction costs represent the costs incurred by construction companies (master builders, professionals) in the execution of construction work. The construction cost index shows the monthly change in material, energy, transportation and wage costs as well as the costs for the use of machinery that construction companies in Austria have to bear for ongoing construction projects in Austria. The index is calculated for construction of residential buildings and for the three civil engineering sectors of road, bridge and sanitary engineering. In the base year of an index period, the mean annual index number is standardised to the value 100.0. This index period is defined as the base year. The mean index number of the construction cost index for the year 2020 is therefore 100.0.

In contrast to construction costs, **construction prices** are the actual prices that clients have to pay to construction companies for the respective construction services. The construction output price index shows the quarterly price changes for construction services provided by companies in Austria and purchased by clients in Austria. The index thus not only provides information on the cost development of the production factors used in the construction process (such as materials and wages), but also on the change in productivity, profit margin etc. of construction companies. The index is calculated for the sectors construction of residential buildings and other structural engineering as well as road and bridge construction along with other civil engineering. Data on the construction output price index can be found on our website.

Statistics Austria is the central organisation for official data and statistics on society, the economy, the state and the environment. As a national statistical institute, it is committed to the statutory principles of independence, impartiality and objectivity. Statistics Austria is headed by Tobias Thomas, Director General Statistics, and Franz Haslauer, Director General Finance.
